JQUERY QUIZ 1

1. In jQuery terminology, what is the difference between the "jQuery function" and the "jQuery object"?

A jQuery function lets you select HTML elements using css selectors. When you call the function and pass a selector to it, it creates a new jQuery object matching all the elements that match the selector.

A jQuery object has properties and methods on it, collects and wraps the DOM elements so they can be manipulated.

2. Write jQuery code to find all h1 elements that are children of a div element and make their background

color red.

Sample HTML:

```
<h1>abc</h1><br>
<div>
   <h1>div-1</h1>
   <h1>div-2</h1>
</div>
<h1>xyz</h1>
```

$("div h1").css({"background-color": "red"})

3. Use a jQuery method to insert the text "YES!" at the end of the <code><p></code> element.

```
<!DOCTYPE html>
<html>
<head>
   <script>
      < !-—INSERT YOUR JQUERY CODE HERE -->

            $("p").append("YES");

         </div >
   </script>
</head>
<body>
   <p>Is jQuery FUN or what? </p>
</body>

</html>
```
